

Bringing serverless to containers with Google Cloud Run

Martin Omander

 @martinomander

Lily started the first Pet Theory clinic 12 years ago

Lily, veterinarian,
Founder of Pet Theory

IT growing pains...

Michael, client

Why can't I change my appointment online?

The appointment system is down...

Patrick, IT support

Deirdre, veterinarian

I have to call insurance companies all the time.

Lisa, receptionist

I wasn't able to send any invoices yesterday. The phone just kept ringing.

Solid IT is a requirement for my business.

Lily, veterinarian,
Founder of Pet Theory

As a pilot project,
let's fix the invoice
problem first.

Ruby,
Consultant

There are two paths to modern cloud systems.

Containers: Docker, Kubernetes

Fine-grained control.
Use any language, binary or library.
Run your code in many places.

Setup and maintenance work.
Provision resources ahead of time.
Pay for idle resources.

Serverless: FaaS, PaaS

No infrastructure management.
Fully managed security.
Pay only for usage.

App is not portable.
Can't use any language.
Can't use any binary or library.

Patrick, IT support

What if we choose the wrong path?

I have read about a new trend in cloud computing...

Ruby, Consultant

A paved path winds through a lush green field under a clear blue sky. The path starts in the foreground, curves to the right, and then continues straight. The grass is vibrant green, and there are some trees in the background. The words 'Containers' and 'Serverless' are overlaid on the path in white text.

Containers

Serverless

Containers: Docker, Kubernetes

Fine-grained control.
Use any language, binary or library.
Run your code in many places.

Setup and maintenance work.
Provision resources ahead of time.
Pay for idle resources.

Serverless: FaaS, PaaS

No infrastructure management.
Fully managed security.
Pay only for usage.

App is not portable.
Can't use any language.
Can't use any binary or library.

The big picture

Open source project

Run it hosted on
Google Cloud Platform

Useful for

Knative
serverless platform

Cloud Run

Events/web +
containers

Kubernetes
container manager

**Kubernetes
Engine**

Containerized
applications

Linux
operating system

**Compute
Engine**

Existing, stateful
applications

Solid IT is a requirement for my business.

Lily, veterinarian,
Founder of Pet Theory

As a pilot project,
let's fix the invoice
problem first.

Ruby,
Consultant

Patrick, IT support

Our on-prem system generates invoices as DOCX files. Lisa used to manually convert them to PDFs, but I found a Python script that does it.

Good work! Let's review the script.

Ruby, Consultant

```
# app.py
```

```
...
```

```
cmd = "libreoffice --headless --convert-to pdf {}".format(filename).split(' ')
```

```
p = subprocess.Popen(cmd, stderr=subprocess.PIPE, stdout=subprocess.PIPE)
```

```
stdout, stderr = p.communicate()
```

```
...
```

Patrick, IT support

You got a problem with that?

Wait a minute - the Python script is using LibreOffice to create PDFs?

Ruby, Consultant

Container

app.py

LibreOffice

Cloud Storage lib

Flask web
framework

gunicorn web server

Let's package it
up in a container.

Demo

pdfgen-cqwnsh3hvg-uc.a.run.app

Lily, veterinarian,
Founder of Pet Theory

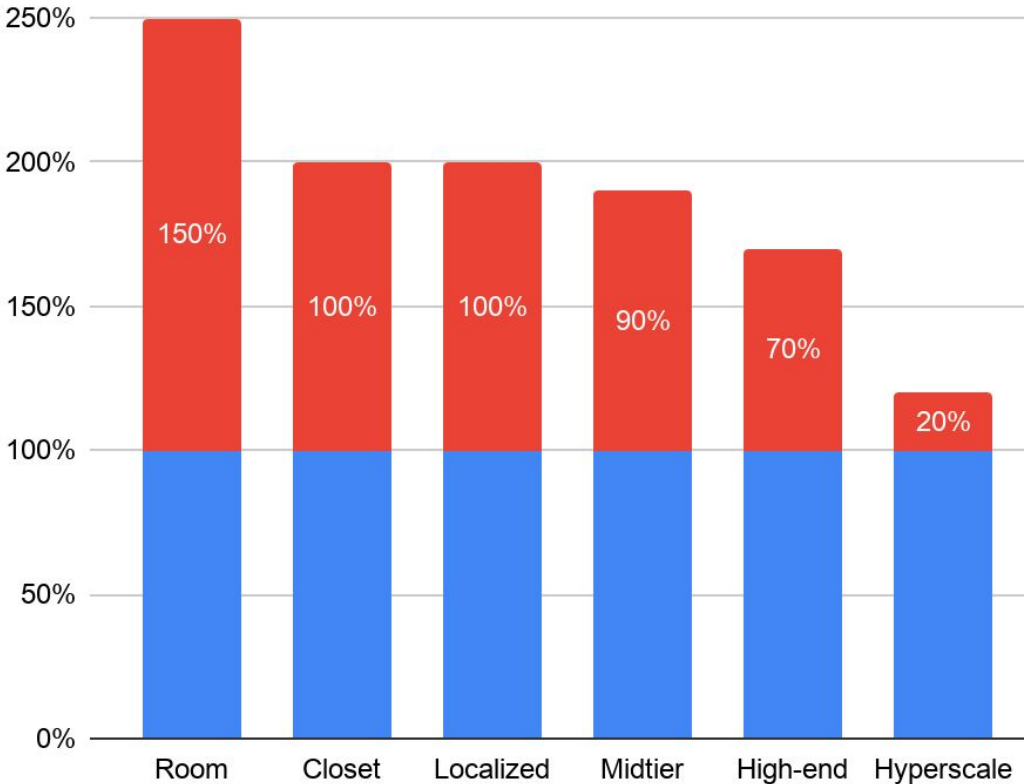

Excellent! My staff
are asking if cloud
computing is
sustainable.

Let me do some
research...

Ruby,
Consultant

Power Usage Efficiency (PUE)

- Overhead for cooling, lighting, transformer losses, etc
- Power for servers

Lily, veterinarian,
Founder of Pet Theory

Looks like cloud
computing fits with Pet
Theory's values.

I am happy that you
are happy.
